SIEMENS

SIMATIC PCS neo Básico (ST-NEO-BASIC)

Breve descripción

En este curso online aprenderás a implementar la diversidad de posibilidades de ingeniería con el nuevo sistema de control de procesos SIMATIC PCS neo de forma estructurada y eficiente. Con la ayuda de la documentación descriptiva del curso como formación online, te familiarizarás con el concepto del sistema y la estructura general del sistema de SIMATIC PCS neo.

Contenido

- Basics: System overview, new concepts, installation, certificates
- Hardware engineering with AS CPU 410-5H, distributed I/O and PROFINET, engineering station
- The first process object: Engineering in CFC with blocks, display in the Monitoring & Control view with block icons and faceplates, downloading the program
- Basic automation: Equipment engineering with equipment hierarchy, process objects of the APL, including spreadsheet engineering with queries and Excel
- Use of the virtual controller and SIMIT for integrated testing and virtual commissioning
- Use of Control Module templates: Templates and template variants
- Configuration of sequencers: Elements, interconnections for basic automation
- Visualization in Monitoring & Control: Engineering of process displays
- User/rights management: User management, access rights for Engineering and Monitoring & Control views
- Multiuser engineering with session model: Synchronizing changes, locking objects and areas
