

## SIMATIC PCS7 System Overview (ST-PCS7UEB)

---

### Short Description

---

This face-to-face course provides you with a sound overview of the SIMATIC PCS 7 process control system.

### Objectives

---

We present you a precise and comprehensive information package. Using typical practical applications and central configuring steps we explain the process control functions and central system aspects like modularity, scalability and integration. You will also get to know and apply the configuring motto "Structuring not programming" and the associated savings in engineering costs with SIMATIC PCS 7.

### Target Group

---

Decision makers  
Sales personnel

### Content

---

The system architecture  
The data flow in the process control system  
Library concept and project structure  
Basics of engineering with charts  
Efficient engineering  
Digitalization in the process industry

### Prerequisites

---

Basic knowledge of process control engineering

### Type

---

Face-to-face training

### Duration

---

2 days

### Language

---

mu
