

SIMATIC PCS7 System Overview (ST-PCS7UEB)

Short Description

This face-to-face course provides you with a sound overview of the SIMATIC PCS 7 process control system.

Objectives

We present you a precise and comprehensive information package. Using typical practical applications and central configuring steps we explain the process control functions and central system aspects like modularity, scalability and integration. You will also get to know and apply the configuring motto "Structuring not programming" and the associated savings in engineering costs with SIMATIC PCS 7.

Target Group

Decision makers
Sales personnel

Content

The system architecture
The data flow in the process control system
Library concept and project structure
Basics of engineering with charts
Efficient engineering
Digitalization in the process industry

Prerequisites

Basic knowledge of process control engineering

Type

Face-to-face training

Duration

2 days

Language

mu
