SIEMENS

Process control engineering for beginner / 过程控制工程入门 (W1104)

Objectives

Open-loop and control processes can be found everywhere in process automation nowadays; it is the task of the process control system to manage these processes and to make them transparent.
But how do they work? What makes a good process control system? You will find answers to these and many other questions in the interactive learning program which provides the general basics from the world of process control technology on the basis of SIMATIC PCS 7.Once you have worked through the WBT, you will be well prepared for the SIMATIC PCS 7 system course.

Target Group

Decision makers, Sales personnel, Commissioning engineers, Service personnel, Operators, Users Maintenance personnel.

Content

- Knowledge of the process
- The automation hardware
- The automation software
- Operator control and monitoring
- Final test

Prerequisites

None

Type

E-Learning

Duration

6 hours

Language

zh

Fee

200 CNY
