

Energy management with SIMATIC Energy Suite / 能源管理套件 (SIMATIC Energy Suite) (A7854)

Objectives

This course is intended for user who would like to set up an energy management system. In addition to general information about energy management, participants acquire the necessary knowledge about the various possibilities of configuration for an automated energy data acquisition. Another focus is the creation of visualization and the export of the acquired data. After the course, you will be able to set up and install an energy management system at your company quickly and efficiently. You will gain an overview of your plant's energy consumption and will be able to optimize this.
