

Polarion Requirements Management and Test Management / Polarion需求管理和测试管理 (基础) (F5301)

Objectives

- You will learn how requirements and test cases can be tracked and managed with Polarion. You will master the basic skills to navigate Polarion and work with project data. You will define your project requirements, specifications, and manage their changes and risks. Different ways how test cases can be planned and executed are covered, as well as the tracking of defects found during test executions.
- Traceability is a key element to successfully manage requirements and Traceability and coverage is a key element for an effective Test Plan and consistent Test Case descriptions. Practical exercises will teach you how to manage traceability in your projects with Polarion Requirements and how to manage traceability between test cases and requirements. After the training, you will learn how to create professional requirements documents for sign-off as well as how to plan requirements to different milestones and how to create professional Test Results reports to proof and ensure that your product was properly tested and is ready for release.
