

Online-Training - SPPA Electric/Control Technology Basic Course (VM-PTOEM)

Ziele

This three-day course is based on SPS / TIA-Portal basic knowledge and extends it by different, more advanced aspects towards project planning and programming with the focus on the Daimler standard. The course is aimed at commissioning engineers, project engineers and programmers who deal with project planning tasks related to the Powertrain Standard in the assembly environment with S7-1500. The aim of the course is to acquire basic knowledge for OEMs in the field of Powertrain Standard in the assembly environment with S7-1500 in order to be able to configure, commission and optimize systems and processes.

Zielgruppe

OEM of Mercedes Benz, worldwide except Germany
Participants from Germany please register for the german course

Inhalte

Basics of the hardware IPC477E and IPC427E (HW structure and control panel packages including presentation of the StartUpSets and libraries with reference to standardization)
Presentation of the Daimler Powertrain specifications
TIA-Portal handling and advanced functions.
Introduction of the PLC program structure for plant control: TIA Portal style guide and building blocks in the template
Commissioning of the hardware PLC, IPC-Ghost, ET200SP, MPP
Programming specifications in KOP, GRAPH and SCL
Fundamentals of the networking concept and project planning of PROFINET and PROFIsafe components
Overview of visualization and message configuration with WinCC Advanced, HMI PRO and Transline
Structure of the function groups within the template
Interfaces and communication between PLC and HMI in connection with function groups
Use of actuators in the template
Autographs and hand graphs within the template
Upgrade from template to a higher version
Actuator/sensor modules in Simatic (robot/screwdriver)
Prisma, presentation of the sample project
