

Online-Training - SIMATIC - Motion Control im TIA Portal (TIA-MC)

Short Description

In order to be able to provide you with the best possible support and training in your personal learning environment (own office/home office), we have implemented selected training courses for you in the form of digital online training. With the help of our virtual learning environment for practical exercises, we provide you with live theory lectures from our expert speakers, which convey the training content described in the learning objectives in a practical and comprehensive manner. In our virtual classroom, our subject specialist is also available to you at any time during your individual practical exercises for in-depth questions and technical discussions. In this course, you will learn to program the motion control functions integrated in the SIMATIC S7-1500/1500T or S7-1200 controllers using TIA Portal. Core topics are the technology objects speed axis, positioning axis, synchronous axis, gearing, cam discs and Safety Integrated with practical exercises on training devices (SIMATIC S7-1500T and SINAMICS). [Also available as face-to-face training](#)

Objectives

- You will program the SIMATIC S7-1500 or S7-1200 controllers in the TIA Portal. You will be able to precisely control the motion of axes with the integrated motion control functions.
- Using the technology CPU, you will extend the applications with absolute synchronous axes and camming.
- In this technology course, you will learn step by step the benefits and the use of these functions. After each learning step, you will deepen your knowledge with hands-on programming.
- After attending the course you will understand the interaction of the technological functions and how camming works. You will be able to select and configure appropriate technology objects, such as speed axis, positioning axis and synchronous axis, and integrate them in your program.

Target Group

- Programmierer
- Commissioning engineers
- Engineering personnel

Content

- Overview of S7-1500T Technology CPU
- Basics of motion control
- SpeedAxis technology object
- PositioningAxis technology object
- Homing and traversing movements
- Programming with PLCopen
- Error messages and diagnostics
- Communication and libraries
- Output cam and measuring input
- SynchronousAxis technology object
- Absolute and relative gearing
- Strategies for synchronization and desynchronization
- Cam disc creation using the graphical cam editor and during runtime
- Closed-loop control and optimization
- Interplay between Motion Control and Safety Integrated
- Cam disc creation using libraries
- Practical exercises on training devices with SIMATIC S7-1500 and SINAMICS drives

Prerequisites

Knowledge of programming in the TIA Portal (equivalent to knowledge after completion of the TIA-PRO1 or TIA-SERV2 course)

- [Technical requirements](#) > VE Lab

Note

- The motion control function of standard CPUs is seamlessly extended with technology CPUs.
- In the TIA-MC12 course, you work with the T-CPU and learn the benefits of functions such as absolute synchronous operation and camming.

Type

Online-Training

Duration

5 days
