

TIA Portal Openness Programming 1 (Online Training) (DI-OPEN1)

Short Description

TIA Portal Openness is the API or programming interface provided with TIA Portal, with which you can efficiently automate engineering tasks without using TIA Portal itself. This includes tasks such as project management, configuration and parameterization of hardware, automatic generation of block code as well as various online functions. During the training, you will create, commission and test your own simple Openness applications. The course will introduce you to the programming language C# in combination with TIA Portal Openness.

Objectives

The aim of the course is to provide you with an introduction to programming with C#. You will learn the basics of the range of languages and performance of the Openness API in Visual Studio and how to use the C# programming language.

By the end of the course you will be able to

- program with Visual Studio and the C# programming language
- create small applications with TIA Openness

Target Group

- Programmers
- Configuring engineers

Content

- Introduction to Visual Studio and the C# programming language
- Control structures (branches and loops)
- Introduction to the most important data types integrated in C#
- Using of methods
- Introduction to the structure of classes and the object-oriented programming concept of C#
- Introduction to the use of interfaces with Windows forms
- Introduction to TIA Portal Openness
- Tools for debugging programs
- Outsourcing of recurring tasks to methods

Prerequisites

- Good TIA Portal knowledge
- Basic high-level programming language knowledge
- [Technical requirements](#)

Note

Included in the course price: Free access to the digital learning platform [SITRAIN access](#) – starting one week before the start of the course until two weeks after the end of the course.

With the Learning Membership, you can deepen or repeat the content of this Learning Event as well as continue your education on other interesting topics.

Type
