

Learning Journey - App development Workflow for the "Industrial Edge" platform (TIA-EDGEADW-LJ)

Short Description

In the Learning Journey "App Development Workflow for the Industrial Edge platform" you will learn to develop, dockerize and package your own applications and make them available in the Industrial Edge Management and Hub. An optimal mix of guided live modules (online) and self-learning modules will provide you with all the content imperative for your work and sustainable learning success. Various practical tasks in our virtual exercise environment throughout the learning journey help you to prepare for practical application. The learning journey provides curated on-demand content to support you in your own personal practice transfer.

[More information on learning journeys](#)

Objectives

After this learning journey you will be able to ...

- know the concept and application of the Industrial Edge Devices and Industrial Edge Management System.
- know the concept of container technology and Docker basics.
- dockerize and package Industrial Edge Apps and test them locally.
- know the publishing process using Industrial Edge Publisher in your Industrial Edge System or in the Industrial Edge Hub.
- implement a wide range of use cases with your own Edge Apps, e.g. KPI analysis, machine learning ...
- implement a wide variety of use cases via download in Docker Hub/GitHub

Target Group

Developer
App Provider
Programmer

Content

Content

The Learning Journey TIA-EDGEAD (Level: Expert) consists of:

- 5 live modules (3 hours each); In addition to the live modules, you should plan about 1 hour of self-study time per day as well as dial-in and follow-up times.
 - 7 Selflearn modules (approx. 9 hours)
 - On-demand themed content (approx. 9 hours)
 - Individual transfer support in the form of a 1:1 coaching (1 hour)
- A learning membership to work through the self-learning modules and access to on-demand content is included for 1 year.

Topics

Industrial Edge

- Introduction to the concept and application of the Industrial Edge Device and Industrial Edge Management System.
- Getting to know the concept of container technology, as well as understanding the basics of Docker.
- Developing apps in the Industrial Edge environment and testing them locally.
- Deployment of self-written edge apps in the Industrial Edge Management System or Industrial Edge Hub, as well as getting to know the publishing process.
- Implementing a wide range of use cases with your own Edge Apps, e.g. KPI analysis, machine learning...
- Realization of a wide variety of use cases via download in Docker Hub/GitHub.
- Deepening the content through hands-on exercises on the virtual training device.

Prerequisites

- Basics of Linux
- Basics of Docker Hub/GitHub/GitLab

In order to be able to take part in this course, you must install the Real VNC Viewer on your PC and the firewall used must not block the communication.
