

Курс IK-PBSYS –Industrial Communication PROFIBUS System Course / IK-PBSYS – System course on the Profibus networks (IK-PBSYS)

Краткое описание

The course teaches the essential theoretical fundamentals of PROFIBUS protocols and services. You will learn how to use the tools for startup, service, testing and diagnostics. Learn the different methods of setting up PROFIBUS networks (RS 485 network components, fiber optics) from Siemens, the market leader for PROFIBUS applications! You will reinforce your theoretical knowledge with numerous practical exercises on SIMATIC S7 devices with HMI components. On completion of this practice-oriented course, you will be able to install and optimize a PROFIBUS DP network, and you will learn step-by-step how you can limit and correct faults quickly. This blended-learning course combines Web-based training on the Internet with a 3-day attendance course. For an optimized postprocessing of the attendance course you get the WBT "PROFIBUS". By using these learning media, you increase your personal learning success in the attendance course.

Целевая группа

Programmers
Commissioning engineers
Engineering personnel
Maintenance personnel
Service personnel
Operators

Содержание

PROFIBUS fundamentals in accordance with EN50170/IEC 61158
Overview of PROFIBUS devices and network components
Connectors, tools, laying
Measurements with the BT200
PROFIBUS diagnostics
Connecting an HMI device to PROFIBUS
Troubleshooting

Требования к участнику

SIMATIC S7 knowledge according to ST-7PRG1 or ST-7SERV1

Заметка

In these course you will work with the SIMATIC STEP 7 V5.x software.

Тип

Индивидуальный курс

Длительность

4 дни

Язык

ru
