SIEMENS

COMOS Training Administration Easy Scripting (COM-AES)

Objectives

The training conveys the first steps for the topic "Scripting in COMOS" and is directly extending the base data know-how you have gained in "Administration Base Objects". It contains simple, practice oriented examples how attribute values or objects symbols are controlled und automated by scripts. Focus is the usage and configuration of prepared, "ready to use" codes (in VB Script) with IF and FOR-statements.

Target Group

COMOS administrators, starting with scripting in COMOS
Please note:
This training is not supposed to convey programming methods and skills in a fundamental and structured way.
So, for your training success practical programming skills are not required, but you should bring interest, curiosity and affinity for this topic.

Content

Calculating attribute values
Dynamic attribute values
Extending object symbols
Extending the context menu

Prerequisites

COMOS Training Administration Base Objects (COM-ABO)
Please note:
