

COMOS Training Administration Database Tools (iDB) (COM-ADT)

Short Description

The training contains short introductions to tools and plugins in the industrial database, which ensure proper and effective handling of customized base objects. The key topics of the five tools are organizing and retrieving base objects on the one hand, bulk creation and bulk processing of base objects on the other hand.

Target Group

COMOS administrators

Please note:

Training contents refer to industrial database (iDB) only. For experienced administrators, which are using cDB, this training might be interesting for getting a deeper insight into iDB.

Content

Attribute tool: Create and search
Attribute tool: Tabs and bulk import
Processing base objects and icons
Managing scripts and hardcoding

Prerequisites

COMOS Training Administration Base Objects,(COM-ABO), preferable familiar with iDB.

Please note:

Training contents refer to industrial database (iDB) only. For experienced administrators, which are using cDB, this training might be interesting for getting a deeper insight into iDB.
