

## Operational Technology Training, Cybersecurity in factory environment (OT-CYBERSEC)

---

### Kort beskrivning

---

This is a cybersecurity training concerning the OT environment. Often the OT and IT teams are separated in the factory and this is a cybersecurity problem since minimizing the cyber risks require awareness and actions from both sides. This seminar is for everyone responsible of the OT cybersecurity. The recommendation is to get responsible from both IT and OT from your site to the same training.

### Målgrupp

---

Personal responsible the factory cyber protection

### Innehåll

---

- OT, IIoT & IoT Basics
- IT/OT evolution
- Directives concerning OT environments
- NIS2.0
- CER
- Design Best practices (IEC62443)
- OT components
- Threats & Vulnerabilities
- Purdue model
- OT Asset Inventory
- Network segmentation

### Förkunskaper

---

Basic understanding about ethernet technology, automation technology and the basics of cybersecurity. The seminar is useful even you would miss some of these prerequisites

### Övrig information

---

The course teaching and material language is English. The material is provided for students in electrical form as pdf document.
