

The Chemical Industry - Safety in general (SILPP-PD13)

Programme / Contenu

In this e-learning module you will get a short introduction to safety, what a risk is and how to measure it. This will be followed by how you can improve your own personal safety in a chemical plant, types of signs and personal protective equipment. We will then have a look at process functional safety, how safety is provided to a process through SIS, SIP and SIL. And finally we will cover hazardous areas, what causes explosions, ATEX zones and product markings.
