

Selection and Projecting with SENTRON components / SENTRON Devre Kesicilerinin Seçimi ve Planlanmas (LV-CBPROJ)

Objectives

The participants get to know the circuit breakers of the SENTRON product portfolio. The focus is placed to the Air Circuit Breakers 3WL and the MCCBs 3VA. This training enables especially planners and members of sales staff to select and engineer these circuit breakers for different applications according to the standards in a professional way. The offered Siemens tools and documents (manuals, catalogues) are used effectively.

Content

- Introduction, overview and selection of Low Voltage switching devices
- Overview, design and applications of Air Circuit Breakers 3WL and MCCBs 3VA
- Demonstration of the modularity and switching principles especially for the ACB 3WL
- Selection and planning / engineering of breakers and accessories according to the standards with exercises
- Available Siemens tools and documents and its effective utilization (configurators, My Documentation Manager, dimension drawings, wiring diagrams)
- Basics of protection settings (diagrams, discrimination, back up protection, introduction of software)

Prerequisites

Basics of electrotechnology and energy distribution. The participant knows the technical properties and possibilities of circuit breakers

Type

Face-to-face training

Duration

1 day
