

"Online-Training" Functional Safety for the Process Industry Workshop & Certification (ST-WSFSP)

Short Description

This workshop provides a common sense understanding of the fundamental aspects and principles of functional safety. It explains how these aspects and principles are implemented by concepts and requirements of IEC 61508 and derivate standards.

[Also available as Face-To-Face Training](#)

Objectives

The aim of this workshop is to equip delegates with information on the scope and main requirements of the current functional safety standards for the process sector, and to give an appreciation of how to apply their principles.

Content

By the end of the workshop delegates will have:-

- Gained an awareness of the key parts of the standards (e.g IEC 61508 and IEC 61511) including Safety Lifecycle, Hazard and Risk Analysis, SIL Determination, Diagnostic Coverage and Common Cause Failures etc, for safety circuit designs.
- Gained an understanding of some of the differences between IEC 61508 and IEC 61511 and the concepts which these standards promote.
- Gained an understanding of the requirements of the standards to deal with the avoidance of systematic errors.
- Be aware of the measures to avoid systematic errors in software.
- Be aware of the architectures of Safety Related Controls and how these architectures relate to practical applications.
- Gained an appreciation of the importance of the component performance and reliability, and how the necessary data can be derived from readily available information

EXAMINATION:

- The objective of the examination is to award candidates who have successfully proven their understanding of Functional Safety for the Process Industry and its application a TÜV Safety Certificate. Candidates who pass with a sufficiently high mark and who also have the pre-requisite experience will also be eligible to apply for registration as "Functional Safety Engineer" in the TÜV SÜD Functional Safety Certification Program.

Prerequisites

The workshop is aimed a managers, technicians and design engineers who have responsibilities for process sector Safety Instrumented Systems (SIS).

Note

Delegates will need to bring a scientific calculator with them to the workshop and examination.
