

SIMATIC PCS 7 System Overview (ST-PCS7SOV)

Krátký popis

This face-to-face course provides you with a sound overview of the SIMATIC PCS 7 process control system.

Cíle školení

We present you a precise and comprehensive information package. Using typical practical applications and central configuring steps we explain the process control functions and central system aspects like modularity, scalability and integration.

You will also get to know and apply the configuring motto "Structuring not programming" and the associated savings in engineering costs with SIMATIC PCS 7.

Cílová skupina

- Decision makers
- Sales personnel

Obsah školení

- The system architecture
- The data flow in the process control system
- Library concept and project structure
- Basics of engineering with charts
- Efficient engineering
- Digitalization in the process industry

Vstupní požadavky na účastníka

- Basic knowledge of electrical engineering, control and feedback control systems and process control engineering.

Poznámky

Course language is English

Typ školení

Prezenní školení

Trvání

2 dny
