

SIMIT in Process Automation (Face-to-face Training) (ST-PCS7SIM)

Short Description

In this face-to-face course you will get to know the software by using the simulation software SIMIT and get an overview of the functions and libraries in the process automation environment.

Objectives

By doing exercises on original SIMATIC PCS 7 training devices and practical examples, you will learn step by step how to design simulations / models for testing PCS 7 automation software. The perfect interaction of all components integrated in SIMIT enables you to produce more in the highest quality over the long term and to establish new products on the market much more quickly.

On completion of the course you are able to:

- create your own components and templates
- to use the possibilities of effective engineering in SIMIT
- to establish couplings between the simulation in SIMIT and PCS 7 automation systems that are emulated with PLCSIM or a virtual controller.

Target Group

- Project manager, Configuring engineers
- Programmers
- Commissioning engineers
- Technologists

Content

- Interfaces to controllers or other applications
- Introduction of the 3 simulation levels and their function
- Creation of templates and efficient engineering by import functions
- Working with libraries provided by SIMIT
- Creation of own components using the Component Type Editor
- Insight into the message system and the Automation Control Interface of SIMIT
- Creation of small simulation projects
- Configuration of a distributed simulation using the Virtual Controller

Prerequisites

- Basic knowledge of electrical engineering, control and feedback control systems and process control engineering.
- Attendance of the system course "["ST-PCS7SYS"](#) is recommended.
- Practical experience in the project planning of SIMATIC PCS 7

Note

Course language is German.

Type

Face-to-face training

Duration

3.5 days

Language

de

Fee

3,132.50 EUR
