SIEMENS

SIMATIC WinCC, Advanced Course (ST-BWINOND)

Ksa tanm

You have attended the WinCC V8.x system course and would like to add to your knowledge and skills. You will learn how to use WinCC options and handle large system configurations (e.g. client/server architectures, redundancy).

Hedefler

The SCADA system (Supervisory Control and Data Acquisition) WinCC is designed for visualization and operator control of processes, production flows, machines and plants.
In the advanced course, you will learn how to use SIMATIC WinCC easily and quickly for your applications. You will also be shown how to log messages and values and how to design and implement the appropriate logs. You can effectively use the engineering phase thanks to what you have learned about reliably operating the system.
After attending the course, you can do the following:
• Troubleshoot errors in C and VB scripts more effectively
• Use WinCC as multi-user system (client/server architectures)
• Configure WinCC with redundant servers
• Configure WinCC for use with web clients
• Create reports with the information server
• Provide contents from WinCC databases (WinCC message and trend archives) with database options for your own applications
• Configure more efficiently
• Get started with automated configuring

Hedef Kitle

You have already attended the "SIMATIC WinCC (ST-BWINCCS)" system course or have equivalent prior knowledge and want to further add to your knowledge.
• Programmers
• Commissioning engineers
• Configuring engineers
• Service personnel
• Maintenance personnel
• Service personnel

çerik

Product version: WinCC V8.1
• In-depth training on Visual Basic Script (VBS actions and VBS object structures)
• In-depth training on C scripts in WinCC
• Introduction of WinCC database (dimensioning of Runtime databases)
• Introduction to networks (TCP/IP, subnetting and name resolution)
• WinCC server (WinCC client with and without project)
• WinCC redundancy option
• Time synchronization (client/server, redundancy)
• WinCC Web Navigator Web option
• WinCC WebUX Web option
• Introduction to Process Historian
• WinCC Information Server Web option
• Cross-system communication: OPC, WinCC options Connectivity Pack/Station, IndustrialDataBridge
• Collaboration with WinCC Unified
• Efficient configuration: CrossReference, ApDiag.exe diagnostic tool
• VBA for automated configuration in Graphics Designer
• Overview of WinCC options: ODK with IndustrialX, User Archive, Simatic Logon, Change Control and Audit, Energy Manager, Calendar Scheduler, Event Notifier, Performance Monitor
• Deeper understanding of contents through practical exercises

Included in the course price: Free access to the digital learning platform SITRAIN access – starting one week before the start of the course until two weeks after the end of the course. With the Learning Membership, you can deepen or repeat the content of this Learning Event as well as continue your education on other interesting topics.

Katlmc önkoullar

The prerequisite is attendance of the course SIMATIC WinCC, System Course (ST-BWINCCS) or equivalent knowledge.

Not

In this course, you will work with the SIMATIC WinCC V8.x (SCADA system). In the course, you will work with a WinCC single-user station. This communicates with a SIMATIC S7-300 and an S7-1500 (with PLCSIM Advanced).
The prerequisite for this course is the basic WinCC course, ST-BWINCCS.

The Learning Membership starts 7 days before the start of the course and ends 14 days after the end of the course. During this period, you have access to all of the more than 480 web-based trainings available.
