

SIMATIC PCS 7 System Overview (ST-PCS7S0V)

简要介绍

This face-to-face course provides you with a sound overview of the SIMATIC PCS 7 process control system.

培训目的

We present you a precise and comprehensive information package. Using typical practical applications and central configuring steps we explain the process control functions and central system aspects like modularity, scalability and integration.

You will also get to know and apply the configuring motto "Structuring not programming" and the associated savings in engineering costs with SIMATIC PCS 7.

培训对象

- Decision makers
- Sales personnel

课程内容

- The system architecture
- The data flow in the process control system
- Library concept and project structure
- Basics of engineering with charts
- Efficient engineering
- Digitalization in the process industry

必备条件

- Basic knowledge of electrical engineering, control and feedback control systems and process control engineering.

注意事项

Course language is English

课程类型

标准课程

培训天数

2 天
